INOAC Packaging Group Introduces Gloss Spray Capability

(Bardstown, KY— April, 2008) – In an ongoing effort to meet customer needs, INOAC Packaging Group has expanded its manufacturing and technology capabilities by introducing a new gloss spray coating process. The gloss spray comes in virtually any color and when applied gives the PET bottle or jar a rich, deep chrome-like appearance. As with all Inoac products, the gloss spray is highly durable and product resistant. It can also be silk screened or hot stamped. One client, Guerlain, has already taken advantage of this new process and Inoac anticipates several other clients to follow suit.

INOAC Packaging Group is an international manufacturer with plants in the United States, Mexico, Japan, and China. INOAC uses a highly refined stretch blow process and PET plastic to create custom containers for some of the most well-known and respected cosmetic companies in the world. INOAC creates innovative packages by combining the aesthetics of shape and color with the practicality of state-of-the-art technology and manufacturing. Inoac Packaging Group is part of the global INOAC Corporation. For more information please visit our website located at www.inoacusa.com.
